BPMN 2.0

Activities

Tasks: Activities which represent individual process steps.

Labeling: Describes how the activities behave.

Type of task: Describes the character of a task.

Events

	Start Events begin new process instances.	Intermediate Events illustrate status / milestones in the process.	End Events symbolize the final status in a process.
None: Untyped events, generally at beginning or end of a process.			
Message: Receiving and sending messages.			
Timer: Periodically timed events, time points, or lapses of time.			
Link: Two corresponding link events represent a sequence flow.			
Errors: Trigger and manage defined errors.			

DMN 1.0

Diagram Elements

Decision: Determining a result value based on input data.

Input Data: Identifies information on which the decision can be based.

Business Knowledge Model: Decision-logic which can be re-used for several decisions.

Knowledge Source: Source of knowledge, from which the decision-logic has been derived (e.g. a law).

Connectors

Information Requirement: represents the application of input data.

Knowledge Requirement: represents the application of a business knowledge model.

Authority Requirement: represents the dependence on a knowledge source.

Hit Policies

Individual results

- U Unique:** Just one rule is applied, no overlap of rules possible.
- A Any:** Rules may overlap, provided that they lead to the same result.
- P Priority:** More than one rule can apply. However, only the rule with the highest priority leads to the result.
- F First:** The first rule which applies, delivers the result.

Several results

- O Output Order:** Delivers all results as a list. The order is based on priorities.
- R Rule Order:** Delivers all results as a list. The order is defined by the order of the rules.
- C Collect:** Delivers all results as a list or in aggregated form (sum, minimum, maximum, quantity).

Operators

= **Equals:** Testing the equality of values.

C **Is element of:** Testing whether the value is contained in quantity.

[..] **Is within the range:** Check if the value is within a certain range.

Attributes

Question: Issue with regards to a decision (example: "Is the customer authorized to borrow?").

Answer: Possible results of a decision (example: "Yes" / "No").
